

**LAB AND DERIVATIVES CONSORTIUM SUBSTANCES  
SUGGESTED INFORMATION AND DATA ENTRY IN IUCLID 5.2  
SECTION 1.1-1.4**

Scope of the document is to give a proposal how to fill some sections of Iuclid5 [IU5.2] for the substances covered by the LAB and derivatives Consortium:

	<b>LAB</b>
<b><i>IUCLID Section 1.1</i></b>	
Existing Reference substances (already present in the IU5.2 database)	Benzene, C10-13 alkyl derivatives, CAS N°: 67774-74-7, EINECS N°: 267-051-0
Reference substance to be created	
type of substance	UVCB
<b><i>IUCLID Section 1.2</i></b>	
Main component (Name)	Benzene, C10-13 alkyl derivatives, CAS N°: 67774-74-7, EINECS N°: 267-051-0 (100%) [UVCB]
PURITY	100%
Constituents	Provide information on each isomer as indicated by spectra shown in chapter 1.4 with the remainder of composition to be designated as "Unknown substance". It is suggested to indicate the typical concentration only as results from GC-MS.
<b><i>IUCLID Section 1.3</i></b>	
	As an identifier, each company should indicate the pre-registration number by which the substance was pre-registered. In cases where the pre-registration number referred to a different substance, indicate, in the remarks section, how this substance was pre registered. For example, pre-registration number xxyy – remarks: substance pre-registered as xxzz
<b><i>IUCLID Section 1.4</i></b>	
	<p>GC GC-MS (LAB constituents identification and other substances if &gt;10%) IR HPLC UV (waiving statement)</p> <p>These spectra will give specific information on substance composition to be indicated in chapter 1.2., but the percentages should fall within the designated ranges in Section 1.2.</p> <p>Other spectra can be added if they do not contrast with information indicated by the above mentioned methods. ECHA is suggesting that all spectra be provided for substance identification, even if they do not give additional information about the substance composition.</p>
